NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

The National Electrical Manufacturers Association (NEMA) and the Insulated Cable Engineers Association (ICEA) standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together persons who have an interest in the topic covered by this publication. While NEMA and ICEA administers the process and establishes rules to promote fairness in the development of consensus, they do not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgements contained in its standards and guideline publications.

NEMA and ICEA disclaims liability for personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA and ICEA disclaims and makes no guaranty or warranty, expressed or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA and ICEA do not undertake to guarantee the performance of any individual manufacturer or seller's products or services by virtue of this standard or guide.

In publishing and making this document available, NEMA and ICEA are not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA and ICEA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgement or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA and ICEA have no power, nor do they undertake to police or enforce compliance with the contents of this document. NEMA and ICEA do not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety-related information in this document shall not be attributable to NEMA and ICEA and is solely the responsibility of the certifier or maker of the statement.

Foreword

This Standard Test Methods Publication for Extruded Dielectric Power, Control, Instrumentation and Portable Cables was developed by the Insulated Cable Engineers Association, Inc. (ICEA) and was approved by the National Electrical Manufacturers Association (NEMA).

ICEA/NEMA Standards are adopted in the public interest and are designed to eliminate misunderstandings between the manufacturers and the user and to assist the user in selecting and obtaining the proper product for his or her particular need. The user of this Standards Publication is cautioned to observe any health or safety regulations and rules relative to the use of the test procedures covered by this document.

Requests for interpretation of this standard must be submitted in writing to:

Insulated Cable Engineers Association, Inc.
P.O. Box 1568
Carrollton, GA 30112

An official written interpretation will be made by the Association.

Suggestions for improvements gained in the use of this publication will be welcomed by the Association.

Section 1 GENERAL

1.1 SCOPE

This standard applies to the testing of extruded dielectric insulated power, control, instrumentation, and portable cables.

1.2 REFERENCES

Included in this standard are many, but not all, of the test methods to which reference is made in ICEA/NEMA Standards for Cables. For undated references, the reference shall be to the latest issue. Copies of the following documents may be obtained from the appropriate source as follows:

National Bureau of Standards
Handbook No. 100 *Copper Wire Tables (February 4, 1966)*

National Bureau of Standards
Handbook No. 109 *Aluminum Wire Tables (February 1972)*

Not all the tests mentioned above are relevant for a given cable design or a given application.

A few specialized test methods are described in ICEA Standard Publication S-94-649, *Standard For Concentric Neutral Cables Rated 5,000 – 46,000 Volts*.

When a procedure for measuring a specified parameter is not specified, that parameter shall be determined by any suitable means.

When another standard is referenced in this document, its title and date of issue may be found in Section 1. The reference is only to that specified document.

In this standard, temperatures are expressed in degrees Celsius, weights in grams, and metal resistivities in nanoohm-meter. Other properties are expressed in U.S. customary units throughout this standard. Approximate International System of Units (SI) equivalents are included for information only. Room temperature is defined as 25±5°C. Where this temperature range cannot be maintained, (test) measurements may be made at the prevailing ambient room temperature, which shall be recorded.

The Fahrenheit equivalents for Celsius degrees may be calculated by the equation

$$\text{deg } F = \left[1.8 \left(\text{deg } C \right) \right] + 32$$

The ounce equivalents to grams may be calculated by dividing the number of grams by 28.4.

The ohm cmil per ft equivalents to nanoohm•meter may be calculated by multiplying the nanoohm•meter value by 0.602.

Conductor size is expressed in cross-sectional area in thousand circular mils (kcmil). For convenience, in the text and tables, only the equivalent AWG size is used for 211.6 kcmil (4/0 AWG) and smaller. For kcmil values of AWG sizes see the following Table 1-1:

**Table 1-1
kcmil Equivalent of AWG Conductor Sizes**

AWG	kcmil	AWG	kcmil	AWG	kcmil
22	0.640	13	5.18	4	41.74
21	0.812	12	6.53	3	52.62
20	1.02	11	8.23	2	66.36
19	1.29	10	10.38	1	83.69
18	1.62	9	13.09	1/0	105.6
17	2.05	8	16.51	2/0	133.1
16	2.58	7	20.82	3/0	167.8
15	3.26	6	26.24	4/0	211.6
14	4.11	5	33.09		

To convert values in a non-metric unit to the approximate value in an appropriate metric unit, multiply the value in the non-metric unit by the appropriate number from the following Table 1-2:

**Table 1-2
Conversion Table**

From	To	Multiplier
inches (in)	millimeters (mm)	25.4
feet (ft)	meter (m)	0.305
ohms per 1000 feet ($\Omega/1000$ ft)	milliohms per meter (m Ω/m)	3.28
square inch (in ²)	square millimeter (mm ²)	645.0
thousand circular mils (kcmil)	square millimeter (mm ²)	0.507
kilovolts per inch or volts per mil (kV/in or V/mil)	megavolts per meter or kilovolts per millimeter (MV/m or kV/mm)	0.0394
pounds per square inch (psi)	kilopascals (kPa)	6.89
pounds tension or force per inch (lb/in)	Newtons per meter (N/m)	175.0
megohms-1000 ft (M Ω -1000 ft)	megohms-meter (M Ω -m)	305.0
gigaohms-1000 ft (G Ω -1000 ft)	gigaohms-meter (G Ω -m)	305.0
liquid ounces (liq oz)	cubic centimeter (cm ³)	29.6

In this standard the following nomenclature is used:

- Jacket- polymeric (nonmetallic) protective covering
- Insulation Shield- semiconducting polymeric (nonmetallic) layer
- Cable Shield-metallic layer
- Sheath-metallic layer
- Armor-metallic layer
